## 1. Introduction

Thank you for choosing 3308010 embedded board. 3308010 is a 5"1/4 form factor CPU board equipped with a low power consumption and high performance Intel processor. It is designed for system manufacturers, integrators, or VARs who want to provide quality and reliable CPU board at a reasonable price.

3308010 has a built-in the ProSavage4 AGP4X VGA controller. It is a 2D/3D graphics controller, which provides resolution up to 1920x1440, and supports both CRT and LCD. The VGA controller can share 8-32MB frame buffer of system memory.

For applications requiring a high-speed serial transmission, 3308010 provides both USB 1.1 and USB 2.0. The high speed USB 2.0 host controller implements an ECHI interface that provides 480Mb/s bandwidth.

Both on-chip UARTs are compatible with the NS16C550. The parallel port and IDE interface are compatible with IBM PC/AT architecture.

3308010 also has a built-in 10/100 Fast Ethernet LAN, which is a fully integrated 10BASE-T/100BASE-TX LAN controller with high performance and low power consumption features.

3308010 uses the advanced VIA VT8606/VT82C686B Chipsets, which is 100% software compatible chipset with PCI 2.2 standard.

## 1.1 Specifications

|                                     |   |
|-------------------------------------|---|
| <b>CPU</b>                          | INTEL Low Power Processor   |
| <b>Bus interface</b>                | PCI/ISA bus   |
| <b>PCI Slot</b>                     | 32 bit PCI expansion slot (Rev. 2.1)  |
| <b>DMA channels</b>                 | 7   |
| <b>Interrupt levels</b>             | 15  |
| <b>Chipset</b>                      | VT8606/VT82C686B  |
| <b>Main memory</b>                  | One 168-pin DIMM socket supports 133Mhz SDRAM. The maximum memory is up to 512MB.   |
| <b>Ultra DMA 100 IDE interface</b>  | Up to four IDE hard drives are supported. The Ultra DMA 100 IDE can handle data transfer up to 100MB/s. Compatible with existing ATA IDE specifications.                              |
| <b>Floppy disk drive interface</b>  | Supports up to two floppy disk drives, 5.25" (360KB and 1.2MB) and/or 3.5" (720KB, 1.44MB, and 2.88MB).   |
| <b>Serial ports</b>                 | Four RS-232 ports with 16C550 UART (or compatible) with 16-byte FIFO buffer. Support up to 115.2Kbps. The ports can be individually configured to COM1, COM2, COM3, COM4 or disabled. |
| <b>Bi-directional parallel port</b> | Configurable to LPT1, LPT2, LPT3 or disabled. Supports EPP/ECP/SPP.   |
| <b>Hardware monitor</b>             | Built-in to monitor power supply voltage and fan speed status.  |
| <b>IrDA port</b>                    | Supports Serial Infrared (SIR) and Amplitude Shift Keyed IR (ASKIR) interface.  |
| <b>USB ports</b>                    | Supports 4 USB2.0 and 2 USB1.1 ports.   |
| <b>Watchdog timer</b>               | Software programmable, reset generated when watchdog timer is time-out.   |
| <b>VGA controller</b>               | Built-in ProSavage4 AGP4X 256-bit 2D/3D graphics engine. 8-32MB share Memory. Screen Resolution: up to 1920x1440.   |

|                                |  |
|--------------------------------|--|
| <b>Ethernet</b>                | Fast Ethernet controllers, IEEE 802.3u Auto-Negotiation supports 10BASE-T/100BASE-TX standard. Two RJ-45 connectors are provided.  |
| <b>Keyboard and PS/2 mouse</b> | A 6-pin mini DIN connector is located on the edge of the board that can be connected to a keyboard or PS/2 mouse. For alternative application, a keyboard and a PS/2 mouse pin header connector are also available on board. |
| <b>Audio</b>                   | AC'97 Audio CODEC  |
| <b>Compact flash</b>           | It can be used with a passive adapter (True IDE Mode) in a Type I/II Socket.   |
| <b>Expansion Socket</b>        | PC/104-Plus compatible (PCI and ISA)   |
| <b>Power consumption</b>       | +5V @ 3A, +12V @ 700mA, +5VSB @ 600mA  |
| <b>Operating temperature</b>   | 0°-60° C   |

## **1.2 What You Have**

3308010's package includes the following items:

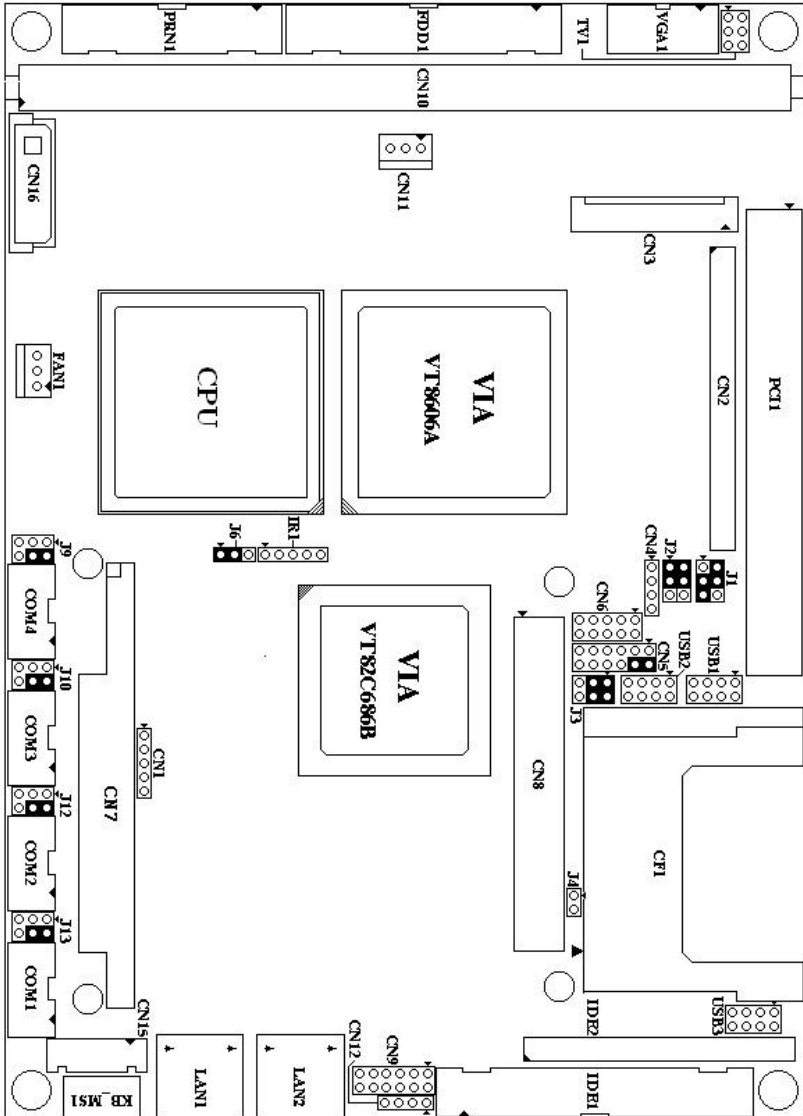

- User Manual
- 3308010 Embedded Board
- Four RS-232 cables
- One Parallel port cable
- One FDD cable
- Two ATA IDE cables
- One Audio cable
- One USB cable
- One VGA cable
- Keyboard and mouse Y-Adapter cable.
- One Driver CD

If any of these items is missing or damaged, contact the dealer from whom you purchased this product. Save the shipping materials and carton in case you want to ship or store the product in the future.

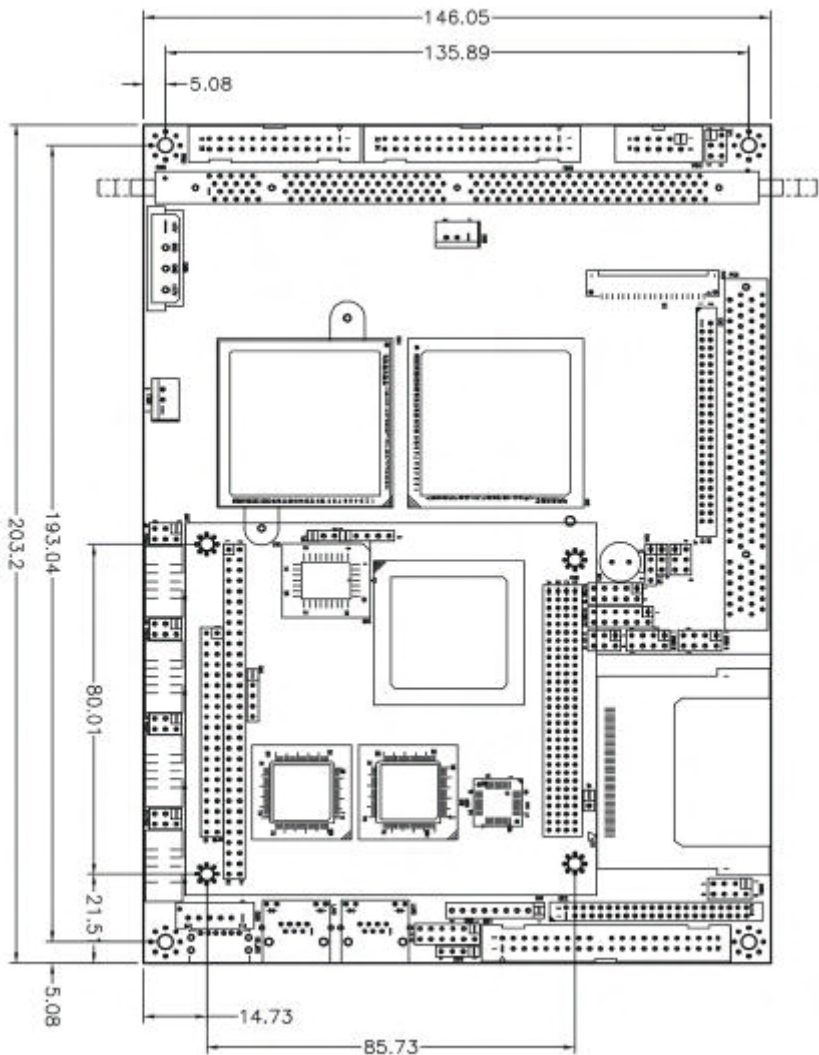

## **2. Installation**

This chapter describes how to install 3308010. Follow the unpacking information carefully and refer to the following diagram of 3308010 when necessary.

### **2.1 3308010 Layout**

## 2.2 3308010 Dimensions (Unit: mm)

## 2.3 Unpacking Precautions

Some components of 3308010 are very sensitive to static electricity and can be damaged by a sudden rush of power. To protect it from unintended damage, be sure to follow these precautions:

- Ground yourself to remove any static charge before touching 3308010. You can do it by using a wrist strap connected to the ground or by frequently touching any conducting materials connected to the ground.
- Handle your 3308010 by its edges. Do not touch IC chips, leads or circuitry.
- Do not plug any connector or jumper when the power is on.

## 2.4 Clear CMOS Setup

To clear the CMOS Setup (for example, if you have forgotten the password, you should clear the CMOS and then re-set the password), you have to close the J6 (2-3) for about 3 seconds, and then open it. This will put the system back to normal operation mode.

### • J6: Clear CMOS Setup

| <b>J6</b>         | <b>Description</b>                    |
|-------------------|---------------------------------------|
| 1-2<br>(default)* | Keep CMOS Setup<br>(Normal Operation) |
| 2-3               | Clear CMOS Setup                      |

*\*Note: All shaded rows in the tables of this manual are the default settings for the 3308010.*

## 2.5 Buzzer Function Setting

- **CN5 (2-4): Enabled/Disabled Onboard Buzzer Function**

| <b>2 - 4</b> | <b>Description</b> |
|--------------|--------------------|
| SHORT        | Enabled            |
| OPEN         | Disabled           |

## 2.6 COM2 RS-232 /422/485 Mode Selection

- **J2: COM2 Mode Selection**

| <b>J2</b>      | <b>Description</b> |
|----------------|--------------------|
| 1-3 Short      | RS232              |
| 3-5, 2-4 Short | RS422              |
| 3-5, 4-6 Short | RS485              |

*Note: If RS422/485 is in use, the RS232 mode on the main board will be disabled.*

## 2.7 TFT LCD Setting

- **J1: LCD type (5V/3V & FPCLK/#FPCLK) Setting**

| J1    | Description |
|-------|-------------|
| 2 - 4 | 3V TFT LCD  |
| 3 - 5 | FPCLK       |
| 4 - 6 | 5V TFT LCD  |
| 1 - 3 | #FPCLK      |

## 2.8 PCI Slot VIO Voltage Setting

- **J3: VIO Voltage (5V/3V) Setting**

| J3    | Description |
|-------|-------------|
| 1 - 3 | 5VIO        |
| 2 - 4 | 5VIO        |
| 3 - 5 | 3VIO        |
| 4 - 6 | 3VIO        |

## 2.9 Serial port's Pin9 Function Setting

To set the function for Pin9 of serial ports (COM1, 2, 3, 4).

- J9, J10, J12, J13: Pin9 Function Setting

| J9, J10, J12, J13 | Description        |
|-------------------|--------------------|
| 2 - 4             | Normal RI Function |
| 1 - 3<br>4 - 6    | 5 Voltage output   |
| 3 - 5<br>4 - 6    | 12 Voltage output  |

## 2.10 Compact Flash Master/Slave Mode Setting

- **J4: Compact Flash Master/Slave Mode Setting**

| <b>J4</b> | <b>Description</b> |
|-----------|--------------------|
| Close     | Master             |
| Open      | Slave              |

### 3. Connection

This chapter describes how to connect peripherals, switches and indicators to the 3308010 board.

#### 3.1 Audio Connectors

The onboard AC'97 CODEC supports several audio functions. The audio connectors are described below.

- **CN9: Audio connector**  
(Speaker out, Line out, Line in, MIC in)

| PIN | Description        | PIN | Description         |
|-----|--------------------|-----|---------------------|
| 1   | Speaker out (Left) | 2   | Speaker Out (Right) |
| 3   | GROUND             | 4   | GROUND              |
| 5   | Line Out (Left)    | 6   | Line Out (Right)    |
| 7   | Line In (Left)     | 8   | Line In (Right)     |
| 9   | GROUND             | 10  | GROUND              |
| 11  | MIC In             | 12  | GROUND              |

- **CN12: Audio CD In connector**

| PIN | Description       |
|-----|-------------------|
| 1   | CD SIGNAL (LEFT)  |
| 2   | GROUND            |
| 3   | GROUND            |
| 4   | CD SIGNAL (RIGHT) |

### 3.2 PCI E-IDE Disk Drive Connector

You can attach up to four IDE (Integrated Device Electronics) devices.

IDE1: Primary IDE Connector (40pin 2.54mm)

IDE2: Secondary IDE Connector (44pin 2.0mm)

#### • IDE1 & IDE2: IDE Interface Connector

| PIN | Description | PIN | Description       |
|-----|-------------|-----|-------------------|
| 1   | RESET#      | 2   | GROUND            |
| 3   | DATA 7      | 4   | DATA 8            |
| 5   | DATA 6      | 6   | DATA 9            |
| 7   | DATA 5      | 8   | DATA 10           |
| 9   | DATA 4      | 10  | DATA 11           |
| 11  | DATA 3      | 12  | DATA 12           |
| 13  | DATA 2      | 14  | DATA 13           |
| 15  | DATA 1      | 16  | DATA 14           |
| 17  | DATA 0      | 18  | DATA 15           |
| 19  | GROUND      | 20  | N/C               |
| 21  | DRQ         | 22  | GROUND            |
| 23  | IOW#        | 24  | GROUND            |
| 25  | IOR#        | 26  | GROUND            |
| 27  | CHRDY       | 28  | (PULL LOW TO GND) |
| 29  | DACK        | 30  | GROUND            |
| 31  | INTERRUPT   | 32  | N/C               |
| 33  | SA1         | 34  | N/C               |
| 35  | SA0         | 36  | SA2               |
| 37  | HDC CS0#    | 38  | HDC CS1#          |
| 39  | HDD ACTIVE# | 40  | GROUND            |
| 41  | +5V(IDE2)   | 42  | +5V(IDE2)         |
| 43  | GND (IDE2)  | 44  | N/C (IDE2)        |

### 3.3 Parallel Port

Usually, a printer is connected to the parallel port. 3308010 includes an on-board parallel port, accessed via a 26-pin flat-cable.

- **PRN1: Parallel Port Connector**

| <b>PIN</b> | <b>Description</b> | <b>PIN</b> | <b>Description</b> |
|------------|--------------------|------------|--------------------|
| 1          | STROBE#            | 2          | DATA 0             |
| 3          | DATA 1             | 4          | DATA 2             |
| 5          | DATA 3             | 6          | DATA 4             |
| 7          | DATA 5             | 8          | DATA 6             |
| 9          | DATA 7             | 10         | ACKNOWLEDGE        |
| 11         | BUSY               | 12         | PAPER EMPTY        |
| 13         | PRINTER SELECT     | 14         | AUTO FORM FEED #   |
| 15         | ERROR#             | 16         | INITIALIZE         |
| 17         | PRINTER SELECT LN# | 18         | GROUND             |
| 19         | GROUND             | 20         | GROUND             |
| 21         | GROUND             | 22         | GROUND             |
| 23         | GROUND             | 24         | GROUND             |
| 25         | GROUND             | 26         | NC                 |

### 3.4 USB Port Connectors

3308010 is equipped with two USB 2.0 ports with high bandwidth (480Mbps) and is backward compatible with USB1.1.

- **USB1, USB2: USB 2.0 Connectors (2 ports each)**

| <b>PIN</b> | <b>Description</b> | <b>PIN</b> | <b>Description</b> |
|------------|--------------------|------------|--------------------|
| 1.         | VCC                | 8.         | GROUND             |
| 2.         | DATA0-             | 7.         | DATA1+             |

|    |        |    |        |
|----|--------|----|--------|
| 3. | DATA0+ | 6. | DATA1- |
| 4. | GROUND | 5. | VCC    |

3308010 is also equipped with two USB 1.1 ports.

- **USB3: USB 1.1 Connector (2 ports)**

| PIN | Description | PIN | Description |
|-----|-------------|-----|-------------|
| 1.  | VCC         | 8.  | GROUND      |
| 2.  | DATA0-      | 7.  | DATA1+      |
| 3.  | DATA0+      | 6.  | DATA1-      |
| 4.  | GROUND      | 5.  | VCC         |

### 3.5 Serial Port

3308010 offers four high-speed NS16C550 compatible UARTs with 16-byte Read/Receive FIFO serial ports.

- **COM1, COM2, COM3, COM4: Serial Port Connectors**

| PIN | Description               |
|-----|---------------------------|
| 1   | DATA CARRIER DETECT (DCD) |
| 2   | RECEIVE DATA (RXD)        |
| 3   | TRANSMIT DATA (TXD)       |
| 4   | DATA TERMINAL READY (DTR) |
| 5   | GROUND (GND)              |
| 6   | DATA SET READY (DSR)      |
| 7   | REQUEST TO SEND (RTS)     |
| 8   | CLEAR TO SEND (CTS)       |
| 9   | RING INDICATOR (RI)       |

### 3.6 Keyboard/Mouse Connector

3308010 has a 6-pin DIN keyboard/mouse connector and a 5-pin keyboard connector.

#### • KB\_MS1: Keyboard/Mouse Connector

| PIN | Description    |
|-----|----------------|
| 1   | KEYBOARD DATA  |
| 2   | MOUSE DATA     |
| 3   | GROUND         |
| 4   | +5V            |
| 5   | KEYBOARD CLOCK |
| 6   | MOUSE CLOCK    |

#### • CN15: 6-pin Keyboard/Mouse Connector

| PIN | Description    |
|-----|----------------|
| 1   | +5V            |
| 2   | MOUSE DATA     |
| 3   | MOUSE CLOCK    |
| 4   | KEYBOARD DATA  |
| 5   | KEYBOARD CLOCK |
| 6   | GROUND         |

### 3.7 IrDA Infrared Interface Port

3308010 comes with an integrated IrDA port, which supports either a Serial Infrared (SIR) or an Amplitude Shift Keyed IR (ASKIR) interface.

#### • IR1: IrDA connector

| PIN | Description |
|-----|-------------|
| 1   | VCC         |
| 2   | IR-RX2      |
| 3   | IR-RX       |
| 4   | Ground      |
| 5   | IR-TX       |

### 3.8 Fan Connector

3308010 also has a CPU cooling fan connector, which can supply 12V/500mA to the fan. There is a rotation pin in the fan connector, which transfers the fan's rotation signal to the system BIOS in order to recognize the fan speed. Please note that only specific fans offer a rotation signal.

- **FAN1: CPU Fan Connector**

| <b>PIN</b> | <b>Description</b> |
|------------|--------------------|
| 1          | Rotation Signal    |
| 2          | +12V               |
| 3          | Ground             |

### 3.9 VGA Connector

- **VGA1: 10-pin VGA Connector**

| <b>PIN</b> | <b>Description</b> | <b>PIN</b> | <b>Description</b> |
|------------|--------------------|------------|--------------------|
| 1          | RED                | 6          | DDCCLK             |
| 2          | GREEN              | 7          | DDCDAT             |
| 3          | BLUE               | 8          | GROUND             |
| 4          | HSYNC              | 9          | GROUND             |
| 5          | VSYNC              | 10         | GROUND             |

### 3.10 TV OUT Connector

3308010 supports both NTSC and PAL signal on the TV-out.

- **TV1: 6-pin TV-OUT Connector**

| PIN | Description | PIN | Description |
|-----|-------------|-----|-------------|
| 1   | GROUND      | 2   | TV_Y        |
| 3   | GROUND      | 4   | TV_C        |
| 5   | GROUND      | 6   | TV_CVBS     |

### 3.11 Digital I/O Connector

The digital IO port of 3308010 is 5V CMOS level. Internal pull-up is existed on the output.

- **CN6: 10-pin Digital I/O Connector**

(Please refer to Appendix D for used digital I/O function)

| PIN | Description | PIN | Description |
|-----|-------------|-----|-------------|
| 1   | GROUND      | 2   | +5V         |
| 3   | INPUT1      | 4   | OUTPUT1     |
| 5   | INPUT2      | 6   | OUTPUT2     |
| 7   | INPUT3      | 8   | OUTPUT3     |
| 9   | INPUT4      | 10  | OUTPUT4     |

### 3.12 Power Connector

3308010 is equipped with one 4-pin power connector.

- **CN16: Power Connector**

| PIN | Description |
|-----|-------------|
| 1   | +5V         |
| 2   | GND         |
| 3   | GND         |
| 4   | +12V        |

### 3.13 External Switches and Indicators

There are several external switches and indicators for monitoring and controlling your CPU board. All functions are in the CN5 connector.

- CN5: Pin Assignment and Functions

| <b>FUNCTION</b> | <b>PIN</b> | <b>Description</b> |                 |
|-----------------|------------|--------------------|-----------------|
| SPEAKER         | 2          | SPK SIGNAL         | Jump for Buzzer |
|                 | 4          | Buzzer-            |                 |
|                 | 6          | NC                 |                 |
|                 | 8          | VCC                |                 |
| RESET           | 10         | RESET              |                 |
|                 | 12         | GROUND             |                 |
| HDD LED         | 9          | IDE_LED+           |                 |
|                 | 11         | IDE_LED-           |                 |
| POWER LED       | 1          | LED+               |                 |
|                 | 3          | LED- (GROUND)      |                 |
| POWER BUTTON    | 5          | GROUND             |                 |
|                 | 7          | PWR-BTN            |                 |

### 3.14 PS-ON Connector

This connector is used to control the on/off of ATX power supply.

- **CN11: PS-ON Connector**  
(Please refer to Appendix F for used with ATX power supply)

| <b>PIN</b> | <b>Description</b> |
|------------|--------------------|
| 1          | +5V Standby        |
| 2          | PS-ON              |
| 3          | Ground             |

### 3.15 LAN Connector

3308010 is equipped with two 10/100Mbps Ethernet controllers, which are connected to the LAN via RJ45 connectors. The pin assignments are as follows.

- **LAN1, LAN2: LAN Connectors (RJ-45)**

| PIN | Description | PIN | Description   |
|-----|-------------|-----|---------------|
| 1   | TX+         | 7   | N/C           |
| 2   | TX-         | 8   | N/C           |
| 3   | RX+         | 9   | Speed +       |
| 4   | N/C         | 10  | Speed -       |
| 5   | N/C         | 11  | Active/LINK + |
| 6   | RX-         | 12  | Active/LINK - |

### 3.16 RS422 / 485 Connector

The RS485 port of 3308010 is half-duplex with auto direction. So you do not have to switch transfer mode while sending or receiving the data.

- **CN4: RS422/485 Connector**

| PIN | Description |
|-----|-------------|
| 1   | TX+         |
| 2   | TX-         |
| 3   | RX+         |
| 4   | RX-         |

### 3.17 TFT LCD Connector

3308010 is equipped with TFT LCD controller, which can be connected to the LCD via CN2

connector. The pin assignments are as follows.

• **CN2: TFT LCD Connector**

| <b>PIN</b> | <b>Description</b> | <b>PIN</b> | <b>Description</b> |
|------------|--------------------|------------|--------------------|
| 1          | N/C                | 2          | FP33               |
| 3          | FP34               | 4          | FP31               |
| 5          | FP35               | 6          | FP32               |
| 7          | FP30               | 8          | FP28               |
| 9          | FP29               | 10         | FP27               |
| 11         | FP25               | 12         | FP26               |

**3.18 LCD Connector**

3308010 can support 1 or 2 channel (18 or 36bit) LVDS panel, which can be connected to CN3. The pin assignments are as follows.

• **CN3: LVDS LCD Connector**

| <b>PIN</b> | <b>Description</b>                  | <b>PIN</b> | <b>Description</b>      |
|------------|-------------------------------------|------------|-------------------------|
| 1          | 2 <sup>nd</sup> LVDS clock output + | 2          | 2nd LVDS clock output - |
| 3          | 2 <sup>nd</sup> LVDS data2 output + | 4          | 2nd LVDS data2 output - |
| 5          | 2 <sup>nd</sup> LVDS data1 output + | 6          | 2nd LVDS data1 output - |
| 7          | 2 <sup>nd</sup> LVDS data0 output + | 8          | 2nd LVDS data0 output - |
| 9          | 1st LVDS clock output +             | 10         | 1st LVDS clock output - |
| 11         | 1st LVDS data2 output +             | 12         | 1st LVDS data2 output - |
| 13         | 1st LVDS data1 output +             | 14         | 1st LVDS data1 output - |
| 15         | 1st LVDS data0 output +             | 16         | 1st LVDS data0 output - |
| 17         | GROUND                              | 18         | GROUND                  |
| 19         | +LCD (+3V or +5V)                   | 20         | +LCD (+3V or +5V)       |

Please refer to Appendix E for the signal mapping of LVDS.

### 3.20 PC/104-Plus Connector

3308010 has a PC/104-Plus connector for both PC/104-Plus and PC/104 modules. The PCI bus of PC/104-Plus is a 32-bit bus running at 33MHz, and it is PCI2.1 compliant.

- **CN8: PC/104-Plus PCI Connector (120-pin PCI bus)**

## Appendix A: Watchdog Timer

The Watchdog Timer is a device to ensure that standalone systems can always recover from abnormal conditions that cause the system to crash. These conditions may result from an external EMI or a software bug. When the system stops working, hardware on the board will perform hardware reset (cold boot) to bring the system back to a known state.

Three I/O ports control the operation of Watchdog Timer.

|               |       |                            |
|---------------|-------|----------------------------|
| 443 (hex)     | Write | Set Watchdog Time period   |
| 443 (hex)     | Read  | Enable the Watchdog Timer  |
| 043/843 (hex) | Read  | Disable the Watchdog Timer |

Prior to enable the Watchdog Timer, user has to set the time-out period. The resolution of the timer is 1 second and the range of the timer is from 1 sec to 255 sec. You need to send the time-out value to the I/O port-443H, and then enable it by reading data from the same I/O port-443H. This will activate the timer that will eventually time out and reset the CPU board. To ensure that this reset condition will not occur, the Watchdog Timer must be periodically refreshed by reading the same I/O port 443H. This must be done within the time-out period that is set by the software, please refer to the example program. Finally, we have to disable the Watchdog timer by reading the I/O port- 843H or 043H. Otherwise the system could reset unconditionally.

---

*A tolerance of at least 5% must be maintained to avoid unknown routines in the operating system (DOS), such as disk I/O that can be very time-consuming. For example, if the time-out period has been set to 10 seconds, the I/O port 443H must be read within 7 seconds.*

---

## Example assembly program:

TIMER\_PORT = 443H

TIMER\_START = 443H

TIMER\_STOP = 843H

**::INITIAL TIMER COUNTER**

*MOV DX, TIMER\_PORT*

*MOV AL, 8* **::8 seconds**

*OUT DX, AL*

*MOV DX, TIMER\_START*

*IN AL, DX.* **::START COUNTER**

*W\_LOOP:*

*MOV DX, TIMER\_STOP*

*IN AL, DX*

*MOV DX, TIMER\_START*

*IN AL, DX* **::RESTART COUNTER**

**::ADD YOUR APPLICATION HERE**

*CMP EXIT\_AP, 0*

*JNE W\_LOOP*

*MOV DX, TIMER\_STOP*

*IN AL, DX*

**::EXIT AP**

## Appendix B: I/O Address Map

### I/O Address Map

| <b>I/O Address</b> | <b>Description</b>                   |
|--------------------|--------------------------------------|
| 000-01F            | DMA Controller #1                    |

| 278-27F            | Parallel Printer Port 2              |
| 2E8-2EF            | Serial Port 4                        |
| 2F8-2FF            | Serial Port 2                        |
| 376-376            | BUS Master PCI IDE Controller        |
| 378-37F            | Parallel Printer Port 1              |
| 3B0-3DF            | AGP Graphic Adapter                  |
| 3E8-3EF            | Serial Port 3                        |
| 3F0-3F7            | Floppy Disk Controller               |
| 3F8-3FF            | Serial Port 1                        |
| 443                | Watchdog timer enable                |
| 480-48F            | PCI BUS                              |
| 843/043            | Watchdog timer disable               |

## 1st MB Memory Address Map

| Memory address | Description   |
|----------------|---------------|
| 00000-9FFFF    | SYSTEM MEMORY |
| A0000-BFFFF    | VGA BUFFER    |
| C0000-CFFFF    | VGA BIOS      |
| E0000-FFFFF    | SYSTEM BIOS   |
| 100000         | EXTEND MEMORY |

## IRQ Mapping Chart

|      |                |       |                |
|------|----------------|-------|----------------|
| IRQ0 | System Timer   | IRQ8  | RTC CMOS clock |
| IRQ1 | Keyboard       | IRQ9  | ACPI STEERING  |
| IRQ2 | IRQ Controller | IRQ10 | COM4           |
| IRQ3 | COM2           | IRQ11 | COM3           |
| IRQ4 | COM1           | IRQ12 | PS/2 mouse     |
| IRQ5 | USB            | IRQ13 | FPU            |
| IRQ6 | FDC            | IRQ14 | Primary IDE    |
| IRQ7 | Printer        | IRQ15 | Secondary IDE  |

## DMA Channel Assignment

| Channel | Function                     |
|---------|------------------------------|
| 0       | Available                    |
| 1       | Available                    |
| 2       | Floppy disk                  |
| 3       | Available                    |
| 4       | Cascade for DMA controller 1 |
| 5       | Available                    |
| 6       | Available                    |
| 7       | Available                    |

## Appendix C: How to use Wake-Up Function

3308010 provides two kinds of Wake-up function. This page describes how to use Modem Wake-Up and LAN Wake-Up functions. Wake-Up function only works with ATX power supply.

### **Wake-Up On Modem(Ring):**

You must set the option **Wake-Up On LAN/Ring** of CMOS SETUP to be enabled. ATX power supply will be switched on when there is a ring signal detected on pin "RI" of serial port.

### **Wake-Up On LAN:**

When your computer is in power-down status, you can see LAN Link/Active LED is flashing. This status indicates that the LAN chip has entered standby mode and waits for Wake-Up signal. You can use other computers to wake up yours by sending ID to it.

ID: ID is the MAC address of your system LAN. Every LAN chip has a factory-set ID, which you can find it from network information in WINDOWS.

ID's format is xxxxxxxxxxxx

**Example ID:** 009027388320

## Appendix D: Digital I/O

One characteristic of digital circuit is its fast response to high or low signal. This kind of response is highly needed for harsh and critical industrial operating environment. That's why we design 4-bit digital inputs and 4-bit digital outputs on the 3308010.

There are two kinds of signals (Input and Output) used by the Digital I/O function. These signals are for the control of external devices that need On/Off circuit. When one of the signals has been selected, the user can read or write data to the system through the Digital I/O.

BIOS function call -- INT 15H is used to control the digital I/O:

### INT 15H

|   |
|---|
| <b>AH - 6FH</b>                               |
| <u>Sub-function:</u>                          |
| <b>AL - 8</b> : Set the Digital port as INPUT |
| <b>AL</b> : Digital I/O input value           |

### Example program:

```
MOV AX, 6F08H ;setting the Digital port is input
INT 15H ;
;;AL low byte = value
```

|  |
|--|
| <b>AH - 6FH</b>                                |
| <u>Sub-function:</u>                           |
| <b>AL - 9</b> : Set the Digital port as OUTPUT |
| <b>BL</b> : Digital I/O output value           |

**Example program:**

```
MOV    AX, 6F09H      ;setting the Digital port is output
MOV    BL, 09H        ;Digital value is 09H
INT    15H            ;
```

**Digital Output is 1001b**

## Appendix E: Signal mapping of LVDS

### 18bit LVDS mapping table

## Appendix F: ATX Power Supply

The following notes show how to connect ATX Power Supply to the CPU board.

1. Disconnect the AC cord of the Power Supply from the AC source to prevent sudden electric surge to the board.

### 3308010 (through Power Button & GND):

2. Connect the power button to the PIN 5,7 of CN5. And connect the power cable from ATX Power supply to CN11 on CPU card. CN16 also has to be provided with 5V and 12V.

If you want to turn on the system, just press the button once. And if you want to turn off the power supply, please press the ATX power switch button for about 4 seconds.
