## Safety Instructions

Integrated circuits on computer boards are sensitive to static electricity. To avoid damaging chips from electrostatic discharge, observe the following precautions:

- Do not remove boards or integrated circuits from their anti-static packaging until you are ready to install them.
- Before handling a board or integrated circuit, touch an unpainted portion of the system unit chassis for a few seconds. This helps to discharge any static electricity on your body.
- Wear a wrist-grounding strap, available from most electronic component stores, when handling boards and components. Fasten the ALLIGATOR clip of the strap to the end of the shielded wire lead from a grounded object. Please wear and connect the strap before handle the product to ensure harmlessly discharge any static electricity through the strap.
- Please use an anti-static pad when putting down any components or parts or tools outside the computer. You may also use an anti-static bag instead of the pad. Please inquire from your local supplier for additional assistance in finding the necessary anti-static gadgets.

**NOTE:** *DO NOT TOUCH THE BOARD OR ANY OTHER SENSITIVE COMPONENTS WITHOUT ALL NECESSARY ANTI-STATIC PROTECTIONS.*

## General Description

The 3308270 is an Intel® 915GV GMCH chipset-based board designed. The 3308270 is an ideal all-in-one PICMG Bus SBC. Additional features include an enhanced I/O with CF, CRT/LVDS, dual GB LAN, audio, SATA, COM, and USB2.0 interfaces.

Designed with the Intel® 915GV GMCH, the board supports Intel® Pentium® 4 processor 2.8~3.4GHz.

Its onboard ATA/33/66/100 to IDE drive interface architecture allows the 3308270 to support data transfers of 33, 66 or 100MB/sec. to one IDE drive connection. The Intel® ICH6 serial ATA controller with two ports supporting transfer rates up to 150MB/sec.

Onboard Intel® 915GV GMCH chipset for CRT display supporting up to 1600 x 1200 x 32-bit at 60MHz. It also supports 24-bit single channel/48-bit dual channel LVDS interface.

System memory is also sufficient with the two DDRII sockets that can support up to 2GB.

Additional onboard connectors include an advanced USB2.0 port providing faster data transmission. And two external RJ-45 connectors for 10/100/1000 Based Ethernet uses.

---

To ensure the reliability in an unmanned or standalone system, the watchdog timer (WDT) onboard 3308270 is designed with software that does not need the arithmetical functions of a real-time clock chip. If any program causes unexpected halts to the system, the onboard WDT will automatically reset the CPU or generate an interrupt to resolve such condition.

## Unpacking

### 2.1 Opening the Delivery Package

The 3308270 is packed in an anti-static bag. The board has components that are easily damaged by static electricity. Do not remove the anti-static wrapping until proper precautions have been taken. Safety Instructions in front of this manual describe anti-static precautions and procedures.

### 2.2 Inspection

After unpacking the board, place it on a raised surface and carefully inspect the board for any damage that might have occurred during shipment. Ground the board and exercise extreme care to prevent damage to the board from static electricity.

## 3.19 Watchdog Timer

Once the Enable cycle is active a Refresh cycle is requested before the time-out period. This restarts counting of the WDT period. When the time counting goes over the period preset of WDT, it will assume that the program operation is abnormal. A system reset signal will restart when such error happens.

The following sample programs show how to enable, disable and refresh the watchdog timer:
